Profile

Computer Science graduate and junior web developer experienced in building and deploying web applications, REST APIs, and databases. Utilized in Next.js, TypeScript, PostgreSQL, and Prisma, with hands-on experience in Docker and CI/CD pipelines. Experience includes platforms for government and research institutions.

Professional Experience

Junior Web Developer Mar 2026 – Present
Philippine Genome Center, UP Diliman
Stack: TypeScript, Node.js, PostgreSQL, Prisma, Next.js, Docker, MinIO, Keycloak, CI/CD

- Develop and maintain REST APIs with input validation, centralized error handling, and OpenAPI documentation via Swagger UI.
- Work on the PostgreSQL database schema using Prisma ORM and migrations, including indexed full-text search.
- Implemented authentication and role-based access with Keycloak, and file storage for specimen images and sequence files with MinIO.
- Containerize the application with Docker and help maintain CI/CD pipelines (Gitea Actions) that run automated tests and deploy to a self-hosted k3s cluster.

Bioinformatics Intern Jul – Aug 2025
Philippine Genome Center, UP Diliman

- Built REST APIs and PostgreSQL database schemas with Express.js for a biological dataset web application with a Next.js frontend.
- Worked with PGC and UP Marine Science Institute researchers to turn their data needs into app features.

Bioinformatics Track Intern Jun – Jul 2024
PGC Visayas Satellite Facility, UP Visayas

- Ran bioinformatics pipelines on a Linux high-performance computing system to process and validate FASTA sequence data.
- Ran genomic workflows on COVID-19 and tomato yellow leaf curl virus samples for viral surveillance.

Selected Projects

PawPal

- Developed a cross-platform mobile application using React Native and Firebase over a one-year software engineering project.
- Served as Scrum Master for a five-person team, running sprint planning and tracking tasks.

Technical Skills

- **Programming:** Python, JavaScript, TypeScript, R
- **Backend & Databases:** Node.js, Express.js, Next.js API routes, PostgreSQL, MySQL, Prisma ORM, REST API design, OpenAPI/Swagger, Zod
- **Frontend:** React, Next.js, React Native, Tailwind CSS, SEO
- **DevOps & Infrastructure:** Docker, Docker Compose, CI/CD (Gitea Actions), MinIO (S3 object storage), Git
- **Authentication:** Keycloak, OpenID Connect / OAuth 2.0, NextAuth, role-based access control
- **Testing:** Vitest, Cypress, Playwright
- **Data & Bioinformatics:** Linux command line, data preprocessing and validation, NCBI BLAST, biological sequence data

Research Studies

Comparative Analysis of Machine Learning Algorithms for Forecasting Palay and Corn Production in Region VI Jan – Jun 2025
Time-series forecasting with multiple ML models on Philippine Statistics Authority data (1987–2024).

Morphometric and Morphological-Based Noninvasive Sex Identification of Blood Cockle *Tegillarca granosa* Jan – Jun 2025
Machine learning and deep learning classification, in collaboration with the UPV Institute of Aquaculture.

Education

University of the Philippines Visayas Dec 2025
Bachelor of Science in Computer Science

- **Relevant Coursework:** Machine Learning, Deep Learning, Computer Vision, Human–Computer Interaction

Eligibility

Career Service Professional Eligibility – Civil Service Commission May 2025
